TO ALL TO WHOM THESE PRESENTS SHALL COME:

Gallatin Valley Seed Company

Whereas, THERE HAS BEEN PRESENTED TO THE

Secretary of Agriculture

AN APPLICATION REQUESTING A CERTIFICATE OF PROTECTION FOR AN ALLEGED NOVEL VARIETY OF SEXUALLY REPRODUCED PLANT, THE NAME AND DESCRIPTION OF WHICH ARE CONTAINED IN THE APPLICATION AND EXHIBITS, A COPY OF WHICH IS HEREUNTO ANNEXED AND MADE A PART HEREOF, AND THE VARIOUS REQUIREMENTS OF LAW IN SUCH CASES MADE AND PROVIDED HAVE BEEN COMPLIED WITH, AND THE TITLE THERETO IS, FROM THE RECORDS OF THE PLANT VARIETY PROTECTION OFFICE, IN THE APPLICANT(S) INDICATED IN THE SAID COPY, AND WHEREAS, UPON DUE EXAMINATION MADE, THE SAID APPLICANT(S) IS (ARE) ADJUDGED TO BE ENTITLED TO A CERTIFICATE OF PLANT VARIETY PROTECTION UNDER THE LAW.

NOW, THEREFORE, THIS CERTIFICATE OF PLANT VARIETY PROTECTION IS TO GRANT UNTO THE SAID APPLICANT(S) AND THE SUCCESSORS, HEIRS OR ASSIGNS OF THE SAID APPLICANT(S) FOR THE TERM OF seventeen YEARS FROM THE DATE OF THIS GRANT, SUBJECT TO THE PAYMENT OF THE REQUIRED FEES AND PERIODIC REPLENISHMENT OF VIABLE BASIC SEED OF THE VARIETY IN A PUBLIC REPOSITORY AS PROVIDED BY LAW, THE RIGHT TO EXCLUDE OTHERS FROM SELLING THE VARIETY, OR OFFERING IT FOR SALE, OR REPRODUCING IT, OR IMPORTING IT, OR EXPORTING IT, OR USING IT IN PRODUCING A HYBRID OR DIFFERENT VARIETY THEREFROM, TO THE EXTENT PROVIDED BY THE PLANT VARIETY PROTECTION ACT (84 STAT. 1542, AS AMENDED, 7 U.S.C. 2321 ET SEQ.)

INSTRUCTIONS

GENERAL: Send an original copy of the application, exhibits and $50.00 fee to U.S. Dept. of Agriculture, Consumer and Marketing Service, Grain Division, Hyattsville, Maryland 20782. Retain one copy for your files. All items on the face of the form are self-explanatory unles noted below.

ITEM

5 Insert the date the applicant determined that he had a new variety.

12a First, give the genealogy, including public and commercial varieties, lines, or clones used, and the breeding method. Second, give the details of subsequent stages of selection and multiplication. Third, indicate the type and frequency of variants during reproduction and multiplication and state how these variants may be identified. Fourth, provide evidence on stability.

12b First, give any special characteristics of the seed and of the plant as it passes through the seedling stage, flowering stage and the fruiting stage. Second, describe the mature plant and compare it with a similar commercial variety grown under the same conditions, and indicate the differences.

12c A supplemental form will be furnished by the PVPO to describe in detail a variety for each kind of seed.

12d Provide complete data indicative of novelty. Seed and plant specimens may be submitted and seeds submitted may be sterile. Where possible, include photographs of plant comparisons, chemical tests, etc.

12e Indicate whether applicant is the actual breeder, the employer of the breeder, the owner through purchase or inheritance, etc.

#73023

Exhibit 12 A (3) Blue Lake GV 2 Bean.

Type and Frequency of Variants.

Blue Lake GV 2, as does most snap bean types, produces a few of each of two mutant types. These are plants with flat pods instead of round pods and plants having pods with suture fibers or strings instead of being stringless. It is difficult to list frequency of these since they become evident only after several generations of increase and the build-up of these mutants in the population is governed by the efficiency of roguing operations to remove them and the effect of naturally occurring selective pressures to which the population is exposed.

Exhibit 12 A (4)

Evidence of Stability.

Reproduction and multiplication of Blue Lake GV 2 has been under the supervision of competent plant breeders using pure-line increase methods to assure satisfactory stability of the line. All early generation increase has been accomplished on a company owned and operated trial grounds and each increase planting has been carefully inspected for occurrence of off-types, mutants, etc.

Exhibit 12 A (2) Blue Lake GV 2 (H122-2) Bean.

Details of Selection and Multiplication.

1965 Single plant selection numbered H122-2 selected from Hybrid number H122 (see pedigree chart).

1966 Planted 2 oz., harvested 25 oz.

1967 Planted 25 oz., harvested 27#. Determined this to be a new and distinct variety.

1968 Planted 26#, harvested 395#.

1969 Planted 141#, harvested 1515#.

1970 Planted 1030#, harvested 18,745#. Used some 1969 seed for testing and evaluation by processors.

1971 None planted. Some 1970 seed used for larger processing trials by canners and freezers.

1972 Planted 3695#, harvested 58,383#.

Note: In order to "introduce" a new bean variety to the processing trade it is often necessary, and a common practice in the bean seed industry, to supply certain processors with seed for pilot test plantings of sufficient size they can have a "run" through their processing equipment, quality control lab., etc. This may result in plantings of 10 to 20 acres requiring 700-2000 pounds of seed. This accounts for the fairly large build-up of seed before a variety can be considered as actually entering commercial channels.

Exhibit 12 B Blue Lake GV 2 Bean.

Botanical Description.

Blue Lake GV 2 is a bean variety with many Blue Lake pod characteristics on a compact Tendercrop type bush. Pods have Blue Lake flavor and are long, firm, fleshy, low in fiber, and slow to develop seed. A similar variety is Bush Blue Lake 274. Blue Lake GV 2 has a much sturdier and more erect bush than Bush Blue Lake 274 and holds pods off the soil more completely when plants are loaded with pods.

Blue Lake GV 2 is earlier maturing and has a longer pod spur than Bush Blue Lake 274.

Exhibit 12 D. Blue Lake GV 2 Bean.

Data Indicative of Novelty.

Blue Lake GV 2 differs from Bush Blue Lake 274 in having a sturdier, more erect, bush resulting in fewer pods coming in contact with the soil; and in being three or four days earlier in reaching processing maturity. Also, Blue Lake GV 2 has lighter colored foliage than Bush Blue Lake 274 and a longer pod spur.

In direct comparison of season of processing maturity on July 25th Blue Lake GV 2 had 4 sieve pods present whereas Bush Blue Lake 274 had only a few 3 sieve pods set. Blue Lake GV 2 has a long pod spur (13-16 mm) while Bush Blue Lake 274 has a relatively short pod spur (8-9 mm).

'Blue Lake GV 2' most closely resembles 'Bush Blue Lake 274'.
